

Basic Shell Scripting Commands

File & Directory Commands

ls - List directory contents

cd <dir> - Change directory

pwd - Show current directory

mkdir <dir> - Create new directory

rm <file> - Remove a file

rm -r <dir> - Remove directory recursively

touch <file> - Create a new empty file

cp <src> <dest> - Copy file or directory

mv <src> <dest> - Move or rename file/directory

cat <file> - Display contents of a file

nano <file> - Open file in nano editor

chmod +x <file> - Make script executable

Text Processing

echo "text" - Print text to terminal

read var - Read input from user

grep "word" file.txt - Search for a pattern in a file

cut -d':' -f1 file.txt - Cut text based on delimiter

awk '{print \$1}' file - Print specific fields from file lines

sed 's/foo/bar/' file - Replace text in file

sort file.txt - Sort lines in a file

uniq file.txt - Remove duplicate lines

Loops & Conditionals

if [condition]; then ... fi - Conditional execution

Basic Shell Scripting Commands

for i in {1..5}; do ... done - Loop through values

while [condition]; do ... done - While loop

case \$var in ...) - Case statement

Variable Handling

```
name="Alice"
```

```
echo "Hello, $name"
```

System Commands

whoami - Current logged-in user

date - Show current date and time

uptime - System uptime

df -h - Disk space usage

top / htop - Show running processes

ps aux - List all processes

kill <PID> - Kill a process

ping google.com - Check network connectivity

Redirection & Pipes

> - Redirect output to a file (overwrite)

>> - Append output to a file

< - Read input from a file

| - Pipe output to another command

Example:

```
ls -l | grep ".txt" > textfiles.txt
```
